

Mosaic Network Controller with Mosaic Optical Director

3 days *remote* technical training

Mosaic Network Controller Software is an advanced platform for reliable, secure and user-friendly management and surveillance of ADTRAN FSP and OSA networks, with full FCAPS support. With our Mosaic Optical Director, service-based management enables you to actively track, manage and support your network with ease.

Objective

This training course explains Mosaic Network Controller software for management of ADTRAN FSP networks. We also introduce the basics of network management. Installation of Mosaic Network Controller server and client software is also included. Practical exercises focus on the discovery of network elements (NEs), on creating WDM services as well as getting familiar with alarms and events on the network elements.

The last training day is devoted to Mosaic Optical Director. We will prepare the Network Elements with dedicated Control Plane/Network Intelligence (NI) settings, NI server (if applicable) and fiber map. After these preparations, we explore Mosaic Optical Director in practice.

Please, note: In case of a remote training session GoToTraining application or another remote training tool, e.g. Teams will be used. We will arrange a short test of the tool upfront the training – you will get invited for both – test and training session, if required.

For the practical exercises trainer will hand over keyboard and mouse to one student at a time for e.g. a configuration exercise. This will require the desktop version of GoToTraining Client installed on the student's computer/laptop.

Please note: recording of the remote training sessions is not permitted.

Benefits & Audience

- Benefits: To achieve self-sufficiency at installation, configuration and maintenance of the Mosaic Network Controller applications, including Mosaic Optical Director for automated service provisioning.
- Class size: 8 attendants maximum
- Certificate of attendance, ATSP exam available on request (separate order)

Mosaic Network Controller with Mosaic Optical Director

Prerequisites

The attendees should have basic knowledge about Networking, TCP/IP, SNMP and Fault Monitoring. Basic Windows and Linux OS skills are required.

Agenda

Theory/Lecture

- Mosaic Network Controller Overview
- Mosaic Network Controller Client GUI
- Fault, Configuration-, Performance- and User Management
- Reporting Tools
- Mosaic Optical Director with GMPLS Control Plane/Network Intelligence

Practice/Lab

- Server and Client Installation
- Server/Client Provisioning
- Manage a FSP network via the Mosaic Network Controller
- Centralized NE Database backup
- Centralized NE Software update
- Mosaic Network Controller High-Availability
- Mosaic Optical Director for automated service provisioning
